Tools for Reproducible Research
Homework 4

1. Create a git repository for the R Markdown document from your third homework.

   It would go something like this:

   ```
   mkdir Homework4
   cd Homework4
   cp ../homework3.Rmd .
   git init
   git add homework3.Rmd
   git commit
   ```

2. Create a new repository at GitHub (perhaps private). Push your local repository to GitHub.

   Locally, you would do something like this:

   ```
   git remote add origin https://github.com/username/Homework4
   git push -u origin master
   ```
